
Cancer Mutation Frequency — p53 R248W & KRAS G12V
R248W is among the top 8 most common TP53 hotspots (IARC R18); G12V is the 2nd most common KRAS mutation i
Red bars mark cancers where the neoepitope candidates (MNWRPILTI / YKLVVVGAV) are therapeutically relevant
p53
Colorectal
3.5% of all TP53 mutations
Skin SCC
3.5% of all TP53 mutations
Pancreas
3.5% of all TP53 mutations
Ovary
3.5% of all TP53 mutations
Oesophageal ADC
3.5% of all TP53 mutations
Breast
3.5% of all TP53 mutations
KRAS
Pancreatic ADC
28–36% of KRAS-mutant PAAD
Lung ADC
~19% of KRAS-mutant LUAD
Small intestine
~14% of KRAS-mutant SIC
Ampullary
~13% of KRAS-mutant
Colorectal
~17% of KRAS-mutant CRC
